DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 2. Claims 17 and 19 are rejected under 35 U.S.C. 102(b) as being anticipated by Brown et al. Brown et al. shows an apparatus for applying tape comprising a frame, a supply reel, R1, a feeder roller, 26, a takeup roller, R2, and a rubber band drive connecting the feeder roller with the takeup roller such that insert grooves in the two rollers establish a rate differential between the rollers (column 5, lines 21-25).

Claim Rejections - 35 USC § 103

- 3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Art Unit: 1734

4. Claims 18 and 20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Brown et al. As shown in paragraph two above, Brown et al. shows a tape applicator with the claimed rollers. Regarding claim 18, although Brown et al. uses different sized insert grooves to accomplish the rate differential, it would have been obvious to one of ordinary skill in the art to just change the size of the roller themselves because they are functionally equivalent alternate expedients for adjusting the speed of a driven roller. Regarding claim 20, Brown et al. also shows a guide roller, 148. Furthermore, it is conventional to make tape applicators with housings with a hinged panel so that the mechanical workings can be reached when necessary, but wherein the casing protects the tape from picking up errant dust.

Allowable Subject Matter

- 5. Claims 1-16 are allowed.
- 6. The following is a statement of reasons for the indication of allowable subject matter:

 Brown et al. fails to show the guide roller to accept a section of the tape from the supply roll; the guide roll only accepts a section of separated liner web. Rodriguez fails to show the rubber band connecting drive means. Lengen et al. fails to show a guide roller.

Conclusion

Any inquiry concerning this communication should be directed to Examiner Mark Osele at telephone number (703) 308-2063. The examiner can normally be reached on Monday, Tuesday, or Thursday from 8:30 to 6:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Richard Crispino, can be reached on (703) 308-3853.

Facsimile correspondence to Art Unit 1734 must now be transmitted through 703-305-7718. This number is for Technology Sector 1700 correspondence only.

When filing a FAX in Technology Sector 1700, please indicate in the Header (upper right) "Official" for papers that are to be entered into the file, and "Unofficial" for draft documents and other communication with the PTO that are not for entry into the file of the application. This will expedite processing of your papers.

Any inquiry of a general nature or relating to the status of this application should be directed to the Group receptionist whose telephone number is (703) 308-0661.
